

# MOST ECONOMICAL DELIVERY: THE FLUX PUMP F425 FOR EMPTYING DRUMS UP TO 99,98%

You are not prepared to accept any residual liquid in the drum in order to avoid problems and costs of disposal or to avoid losing high value liquids.

Before the motor is switched off, the flowback stop valve at the pump inlet must be closed by operating the lever. This prevents the liquid flowing back into the empty drum.

## Special advantages:

- Especially easy operating of the pump
- Optimum use of the liquids
- Remains of less than 2 ounces

Here the FLUX F 425 for emptying drums up to 99,98 % is your pump.

Flexible coupling between pump and motor

Operating levers to close/open the flowback stop valve

Packaging of the mechanical seal and rotary shaft seal adjacent to each other ensures the maximum integrity of the sealed inner tube

Impeller in ETFE

Flowback stop valve

**NOTE** All FLUX drum pumps are stripped for cleaning with a minimum of effort.
